

Feline Urologic Syndrome

Diagnostic Plan

History
Physical examination
Abdominal palpation
Urethral palpation
Urinalysis
Urine culture
X-rays of the urinary tract
Blood work

Therapeutic Plan

Emptying of the bladder
Fluid therapy
Removal of the
urethral obstruction

Dietary Plan

For dissolution, the proper calculolytic diet
To aid in prevention or recurrence, a diet that allows the body to produce the appropriate urine pH and avoids excesses of the urolith's precursors
If surgery is necessary, a diet adequate for tissue repair
